We can thank the British for an invention more than 50 years ago that has made automobile driving safer for us. This invention is the traffic [roundabout](#).

The concept is quite simple, really. Instead of traffic totally stopping at an intersection before heading in the desired direction, traffic doesn't stop in a roundabout. It merely slows down to create a one-way continuous circular approach around the intersection. The driver enters the roundabout and exits on the desired intersection street.

A traffic roundabout's benefits include:

- Fewer accidents at an intersection since all cars must slow down in order to enter;
- Less exhaust pollution since cars aren't idling until the traffic light changes;
- Better use of time since cars are continuously moving around the intersection.

Not long ago, a familiar intersection near where I live was changed into a roundabout. At first, there was microsecond confusion about how this worked, but drivers quickly caught on. It's easier to understand how the roundabout works by driving it rather than explaining it. Now the roundabout is second nature.

I was skittish about using the roundabout the first time. Because one must enter the traffic stream, what was it like to actually get into the circular traffic flow? Could I do that safely? Would other cars let me in?

It didn't take long to feel confident about using the roundabout and, recently being so experienced in using this, it occurred to me that society would be better if we all practiced these roundabout principles even when we're not driving:

Principle No. 1: You start by paying attention to everyone else.

- What cars are already in the circle? They have the right of way.
- What cars are waiting to join the circle?
- What cars are closest to me?
- What cars are continuing past me, or which are exiting before reaching where I am in the circle?

Principle No. 2: You finish by others paying attention to you.

- What cars are now waiting for me to go around the circle?

- What cars are entering behind me?
- What cars are holding back so that I can exit?
- What cars are watching for my blinker?

The term "civil society" can mean several things, including the combination of societal elements like business, politics, labor and family. Instead of that, I choose to focus on the civility needed in society in order for us to show courtesy and respect to each other. My term is "civilized behavior society."

If my behavior is considerate, then that improves and builds up society. Being courteous to you doesn't diminish me. If society demonstrated the above roundabout principles, this wisdom could prevail:

- Wisdom No. 1: Watch out for others.
- Wisdom No. 2: Others watch out for me.
- Wisdom No. 3: All are equal using the roundabout.
- Wisdom No. 4: Everyone operates the same way in a roundabout.

Demographics don't matter in a roundabout. Not wealth or race or political party or creed. We're all just cars united in the brief activity of negotiating an intersection.

A roundabout can provide us several takeaways:

- Communication: We indicate our intentions and then follow through.
- Tolerance: We wait our turns.
- Rationality: We use our own judgment about timing to enter a roundabout (versus relying on a traffic light to decide that for us).
- Courage: We assert ourselves to enter/exit the traffic queue.
- Consistency: We do the roundabout the same way each time.
- Control: We keep moving at the pace of the group.

Society would be better for all of us being more considerate of others.

Consider the COVID-19 pandemic affecting the entire world. I would voluntarily wear a facemask to protect you. I would voluntarily practice social distancing. I would do whatever I could to help stop the spread of the virus.

Consider the Black Lives Matter effort and the reality of racial inequality. I would naturally appreciate my neighbor. I would be engaged in the give-and-take of daily life without focusing on the color of skin. All come along and no one is left behind.

Consider the strict party lines that are being exhibited in our U.S. Congress. If senators and representatives cared about getting things accomplished for constituents, the constant and inveterate bickering along party lines wouldn't be the norm.

Yes, society should be like a traffic roundabout.
